Injection Technique. The basics.

Preparing for injection

Clean injection site and hands

(alcohol is not required)

Gather supplies.

Including your pen, insulin and pen needles.

Mix cloudy insulins: roll 10 times, then tip 10 times to see milky white consistency.

Use pen needles and syringes only once.

Prime your pen.

Prime pen upwards with 2 or 3 units as per pen instructions. Repeat if needed until drops come out. (GLP-1 pens only need to be primed the 1st time you use them))

Injecting

Choose injection site.

(injection into the back of your own arm is not recommended)

Remember

Rotate between injection areas

Rotate within injection zones

Dispose

Dial dose. Insert, push completely and count to 10.

Withdraw the needle from the skin. Remove pen needle and dispose of it in an approved sharps container.

To ensure you are getting your insulin where it needs to go, to be properly absorbed, ask a health care professional to help determine the injection sites and technique that would be best for you.

Injection Technique. The basics. Children Children (>6 years) & Children (>6 years) Adults Adults (2-6 years) Teens (slim) & Teens (slim) 4mm 5_mm 6mm (pen or syringe) Preferable to use shorter pen needles and syringes 8mm 8mm (pen or syringe)

Did you know?

12.7mm

There is a correct, and incorrect way to perform a skin lift. Delicately lift the skin and subcutaneous tissue, or fatty layer, between your thumb and index finger, leaving the muscle behind.

Not Recommended
